Occupancy days (short-term rental)

Reminders

FAQ

What is Cana Check?

Cana Check tells you which preventive maintenance is due at each property and when, reminds you on your phone and keeps a record of what was done, with photos. It's designed for Punta Cana and Bávaro (salt air, humidity, hurricane season) and for short-term rentals. No account needed: your data stays on your phone.

- One or more properties: apartment, villa, house or condo common areas.
- Maintenance plan built from each property's equipment (AC, pool, cistern, inverter, generator...).
- Phone reminders, with the reason behind each task.
- Occupancy days so work gets done when there are no guests.
- Job board: pending, scheduled, in progress and done.
- Before and after photos, monthly PDF report and Excel export.

Getting started

1. Open the app and choose the language, how you'll use it (owner, manager or technician) and your name.
2. Allow notifications: that's how reminders reach you.
3. Tap “Add property”: name it, pick the type and select the equipment and facilities it has.
4. If you rent it by the night, keep “Short-term rental” on and add the occupancy days.

> Want to see it working before entering your data? On Home tap “Try it with a sample property”. You can delete it later from the property (pencil → Delete).

The maintenance plan

In each property, the “Plan” tab lists tasks grouped by area. Each shows its status: overdue, coming up, up to date or no record. Tap a task to see why it matters and what to do with it.

- Mark as done: records the job with date, who did it, cost, notes and photos.
- Schedule: creates the job with a date and who it's assigned to.
- Already done: if you have no record, say roughly when it was done and the plan catches up.
- Frequency: change it if your property needs more or less.
- Doesn't apply: hides the task (you can restore it at the end of the plan).
- Add your own task: for anything not in the catalog.

> Before hurricane season (June 1) and high season (mid-December), the app moves up the tasks that should be ready by those dates.

Occupancy days (short-term rental)

1. Open the property → “Occupancy” tab → “Add occupancy days”.
2. Tap the arrival day, then the departure day.
3. Choose “Booked” (confirmed) or “Projected” (expected occupancy) and save.

With that, Home shows the next free days and what to do in them (first what needs an empty unit, like fumigation or painting), and warns you when a busy period is coming. When you schedule a job, the app warns you if there are guests that day.

Jobs, photos and who did it

The “Jobs” tab is the board: Pending, Scheduled, In progress and Done. “Pending” also shows plan tasks that are overdue or coming up. Tap + to create a job that isn't in the plan (for example, a repair).

- Anyone can mark a job as done: owner, manager, technician or an outside contractor.
- Add “Before” and “After” photos with the camera or from the gallery. Tap a photo to view it full size or delete it.
- Use the share button (top) to send the job summary on WhatsApp.
- Need a technician? Open jobs let you message Cana Escapes Maintenance.

Reminders

- The day a plan task is due.
- The day before and the day of each scheduled job.
- A summary when you have overdue tasks.

- A weekly tip about tasks with no record, with the reason why.
- Hurricane-season and high-season alerts.

In More → Settings you pick the reminder time and can send yourself a test.

Reports, Excel and backup

- Monthly report (More): pick the month and property and tap “Generate & share PDF”. It includes completed jobs with photos, in progress, scheduled and pending, with the total cost.
- Excel export: the job history and the maintenance plan come out as tables that open in Excel or Google Sheets.
- Backup: “Export backup” creates a file with all your data and photos. Keep it in Drive or send it to yourself.
- Restore: on another phone (or after reinstalling) tap “Restore a backup” and pick that file.

Your data is only on this phone. If you uninstall the app without a backup, it's lost.

FAQ

Does it cost anything?

No. Cana Check is free, with no ads and no account.

Do the manager and the technician see the same data?

For now each phone has its own data. To pass information along, share the PDF report, the Excel file, a job summary or a backup.

I'm not getting reminders

Make sure they're on in More → Settings and that the phone allows Cana Check notifications. Some phones close apps to save battery: exclude Cana Check from battery optimization.

How do I update the app?

When a new version is out, a notice appears in More. Tap “Update” and then “Install”. Your data is kept.
