What is Cana Scanner?

Cana Scanner turns your phone camera into a scanner. It detects the document edges, crops and straightens it, recognizes the text and creates a PDF ready to send. No account or sign-up needed: your documents are stored only on your phone.

- Scan one- or multi-page documents (up to 30 per scan).
- Edit: write with a pen, highlight, erase and paste photos (signature, stamp, logo).
- Add, remove and reorder pages.
- Copy the document's text (text recognition, OCR).
- Share the PDF via WhatsApp, email, Drive or any app.

Install the app

1. On your Android phone go to canaescapes.com/apps and tap “Download APK” under Cana Scanner.
2. Open the downloaded file (from the notification or the Downloads folder).
3. If Android asks, allow “Install unknown apps” for your browser.
4. Tap “Install” and then “Open”.

> The first time, stay online: the phone downloads Google's scanning and text-recognition components in the background. After that it works smoothly.

Scan a document

1. Tap the big “Escanear documento” (Scan document) button.
2. Point the camera at the document. The scanner detects the edges and takes the photo automatically; you can also take it yourself with the shutter button.
3. Review the page: you can crop, rotate, apply a filter (e.g. black and white) or clean stains and fingers.
4. For a multi-page document, use the add-page option and scan the next one.
5. If the photo is already in your gallery, you can import it from the scanner itself.
6. When you're done, tap save. You'll see “Reconociendo texto y creando PDF...” (recognizing text and creating PDF).
7. “Documento listo” (Document ready) appears with two options: “Editar” (Edit) or “Compartir” (Share). You can also close the message — the document is already saved.

For best results: good light, the document flat and on a contrasting background (e.g. white paper on a dark table).

Each document is named automatically with the date and time, e.g. “Escaneo 2026-10-18 09.30”. You can rename it at any time.

My documents

On the main screen, under “MIS DOCUMENTOS” (my documents), each document shows its name, number of pages, size and date. Tap a document to open it. Below it you'll find these buttons:

- Compartir (Share) — send the PDF via WhatsApp, email, Drive, etc.
- Abrir (Open) — show the PDF in your phone's PDF reader.
- Editar (Edit) — open the editor (pen, highlighter, photos, pages).
- Texto (Text) — show the recognized text so you can copy it.
- Renombrar (Rename) — change the document name (and the shared PDF's name).
- Eliminar (Delete) — delete the document. This can't be undone.

Edit a document

Tap “Editar” on a document. At the top you have “Cancelar” (Cancel) and “Guardar” (Save); the page is in the middle, and the ‹ › arrows move between pages (“Página 1 de 3”). The tools are at the bottom:

- ✎ Lápiz (Pen) — write or sign with your finger. Pick the color below.
- ▮ Resaltar (Highlight) — mark text like a highlighter (translucent color).
- ⌫ Borrar (Erase) — tap a stroke to erase it.
- ✋ Mover foto (Move photo) — move a pasted photo. Drag it; use the corner or two fingers to resize it. “Quitar foto” removes it.
- ↶ Deshacer (Undo) — undo the last change.

- Limpiar (Clear) — erase all strokes on the current page.

To organize pages:

- + Página (Page) — scan more pages and add them to the document.
- + Foto (Photo) — paste a photo from your gallery on top of the page (great for a signature, stamp or logo).
- ⇠ Antes / Después ⇢ (Before / After) — move the current page earlier or later.
- Quitar página (Remove page) — delete the current page (the document must keep at least one).

> Tap “Guardar” to create the PDF with your changes. If you tap “Cancelar” or use the back gesture, the app asks before discarding unsaved changes.

Copy the text (OCR)

Cana Scanner reads the text on each page. You can copy it to paste into a message or document, and the PDF becomes “searchable”: in a PDF reader you can search for words and select text.

1. Tap “Texto” on the document.
2. “Copiar todo” (Copy all) copies the text of every page.
3. “Copiar” (Copy) next to each page copies only that page.
4. To copy just a part, press and hold the text and select what you need.

> If you just installed the app, the first document may come out without text while the phone downloads the reader. Tap “Texto” later (while online) and it will be recognized.

Share the PDF

1. Tap “Compartir” on the document (or in the “Documento listo” message).
2. Choose the app: WhatsApp, Gmail, Drive, Telegram...
3. The PDF is sent with the document's name.

Rename it before sending (e.g. “Contract Apt 302”) so the recipient knows what it is.

Updates

When a new version is out, the app shows “Nueva versión disponible” (new version available) at the top with what's new. Tap “Actualizar” (Update) and then “Install”. Your documents are kept. You can also check manually by tapping “Buscar actualizaciones” (check for updates) at the bottom of the main screen.

FAQ

Are my documents uploaded to the internet?

No. They're stored only on your phone. They only leave it when you share them.

What happens if I uninstall the app?

Android deletes the documents along with the app. Save important ones to Drive or send them to yourself first. Updating the app, on the other hand, keeps everything.

It says “Sin visor de PDF” (no PDF viewer) when I tap “Abrir”.

Your phone has no PDF reader. Install Google Drive (or any reader) or use “Compartir”.

The document has no text.

Tap “Texto” again while online. If the photo is blurry or dark, scan it again.

How many pages can a document have?

Up to 30 per scan, and with “+ Página” in the editor you can keep adding more.
