FAQ

What is Cana Track?

Cana Track lets a work team (transport, motorbike delivery, staff on the move) share their real-time location with their administrator. There are two kinds of people in the app:

- User — the person sharing their location. Joins with just their name and WhatsApp.
- Administrator — sees the team on the map, sends them alerts and reviews the history.

Location is only shared while the user has it turned on, and a persistent notification is always visible meanwhile.

Install the app

1. On your Android phone go to canaescapes.com/apps and tap “Download APK” under Cana Track.
2. Open the downloaded file (from the notification or the Downloads folder).
3. If Android asks, allow “Install unknown apps” for your browser.
4. Tap “Install” and then “Open”.

For users

The person sharing their location

Join

1. Open Cana Track.
2. Type your name and your WhatsApp number (e.g. 809...).
3. Pick your vehicle: 🏍️ Motorbike, 🚗 Car, 🚙 SUV, 🚐 Minivan, 🛻 Pickup, 🚌 Bus, 🚚 Truck, 🚲 Bicycle or 🚶 On foot.
4. Optionally, type the plate or a vehicle detail.
5. Tap “Guardar” (Save). Done: no password needed, the app remembers you.

If you switch phones or reinstall the app, join with the same WhatsApp and your history is kept. To fix your name, WhatsApp or vehicle, tap your card (“Toca para editar”).

Share your location

1. Tap the big “Compartir ubicación” (Share location) button.
2. The first time, Android asks for location permission: allow it.
3. The app explains and takes you to choose “Allow all the time”. This is needed to keep sharing with the screen off or while using other apps.
4. It also asks to remove battery optimization for Cana Track: accept, so Android doesn't close it.
5. The button turns green with a pulse and the status says “Compartiendo” (sharing). You'll see the “Cana Track · Compartiendo ubicación” notification at the top.
6. When you're done, tap “Dejar de compartir” (Stop sharing). Your team stops seeing you.

Your screen

- Estado (Status) — “Compartiendo” (sharing) or “Sin compartir” (not sharing).
- Batería (Battery) — your battery level, which your administrator also sees.
- Último envío (Last sent) — how long ago your last location was sent.
- Pendientes (sin señal) (Pending, no signal) — locations saved while you had no signal; they're sent automatically when it returns.
- ↻ Actualizar ubicación (Update location) — sends your location right now and restarts sending if something got stuck.
- Escribir a la oficina por WhatsApp — opens the chat with your administrator.

The ping (timbre)

Your administrator can send you a “timbre” (ping): you get a “Timbre de la oficina” notification asking you to write back. Tap it and WhatsApp opens with “Hola, recibí el timbre.” (Hi, I got the ping) ready to send.

The ping arrives while you're sharing your location, usually within seconds.

Battery and signal tips

- Share only while working and tap “Dejar de compartir” when done.
- On some phones (Samsung, Xiaomi, Huawei...) check Settings › Apps › Cana Track › Battery is set to “Unrestricted”.
- Don't swipe the app away from “Recents” while sharing.
- If your administrator says they can't see you, tap “↻ Actualizar ubicación”.

For administrators

Who sees the team on the map

Create your administrator account

1. On the start screen tap “Soy administrador” (I'm an administrator) and then “Crear cuenta de administrador”.
2. Type your name, your WhatsApp (your users will write to you there), your email and a password of at least 6 characters.
3. Tap “Crear cuenta”. You'll see “Cuenta pendiente” (pending account): Cana Escapes activates your account and assigns your team.
4. Once active, sign in with “Soy administrador”, your email and password (“Entrar”). The app remembers your email.

To add people to your team, share the link canaescapes.com/apps so they install Cana Track and join with their name and WhatsApp.

The map and the list

When you sign in you see the map with your team and, below it, the user list with each vehicle's emoji and a colored dot:

- En vivo (Live) — sharing and sending location.
- Sin señal reciente (No recent signal) — sharing, but no location has arrived for a while (no signal, or the phone closed the app).
- Sin compartir (Not sharing) — location is turned off.

Map buttons: 🚦 Tráfico (shows traffic), 🛰️ Satélite (satellite view) and “Ver todos” (fit the whole team on screen).

View a user

Tap a user in the list or on the map. You'll see:

- 📍 The area or address where they are, with “Ver en Google Maps” to navigate there.
- Status, speed, battery and how long ago it was updated.
- The current trip's route drawn on the map.
- 🔔 Timbre (Ping) — sends an alert asking them to write to you. You'll see when they got it.
- WhatsApp and Llamar (Call) — to contact them directly.

To send pings, first set your WhatsApp in “Ajustes” (Settings). It's the number your users will write to.

Settings and leaving

- Ajustes (Settings) — your WhatsApp for messages, your team's user list and “Cerrar sesión” (sign out).
- Salir (Exit) — closes the app but keeps you signed in; next time you go straight in.
- Cerrar sesión (Sign out) — you'll need your email and password to get back in.

Web dashboard

You can also see your team from a computer: go to canaescapes.com › Acceder (Sign in) with the same email and password. You'll get a large live map, the user list with battery, ping and WhatsApp, and the session history (when each person started and stopped sharing, the duration and battery).

FAQ

Can they see me when I'm not sharing?

No. Your location is only sent while the button shows “Compartiendo” and you see the persistent notification.

A user shows “Sin señal reciente”.

They may be in an area with no signal (locations are sent when it returns) or their phone closed the app. Ask them to tap “↻ Actualizar ubicación” and check the battery settings.

Nobody appears in my list.

Your users must install the app and join; then Cana Escapes assigns them to your team. Message us if someone is missing.

How long is the history kept?

Routes are kept for 30 days.

How do I update the app?

When a new version is out, the app asks when you open it. Tap “Actualizar” and then “Install”. Your data is kept.
